Introduction

THIS BOOKLET is issued in the belief that it may be of assistance to Architects and Builders as well as to the Private Individual, primarily in connection with the use of

ELLIOTT'S SMALL ANTIQUE HAND MADE BRICKS AND TILES

for Old English Fireplaces.

A number of designs of fireplaces are shown as suggestions and prices quoted, but a special feature of our works in the past has been the carrying out of Architects' own designs, and we shall always be pleased to quote estimates for this work promptly.

All enquiries, etc., to be sent direct
to

An Old Kiln

A few designs of garden ornament are included to indicate the variety of uses of our bricks, and this class of work to special designs will receive our prompt attention.

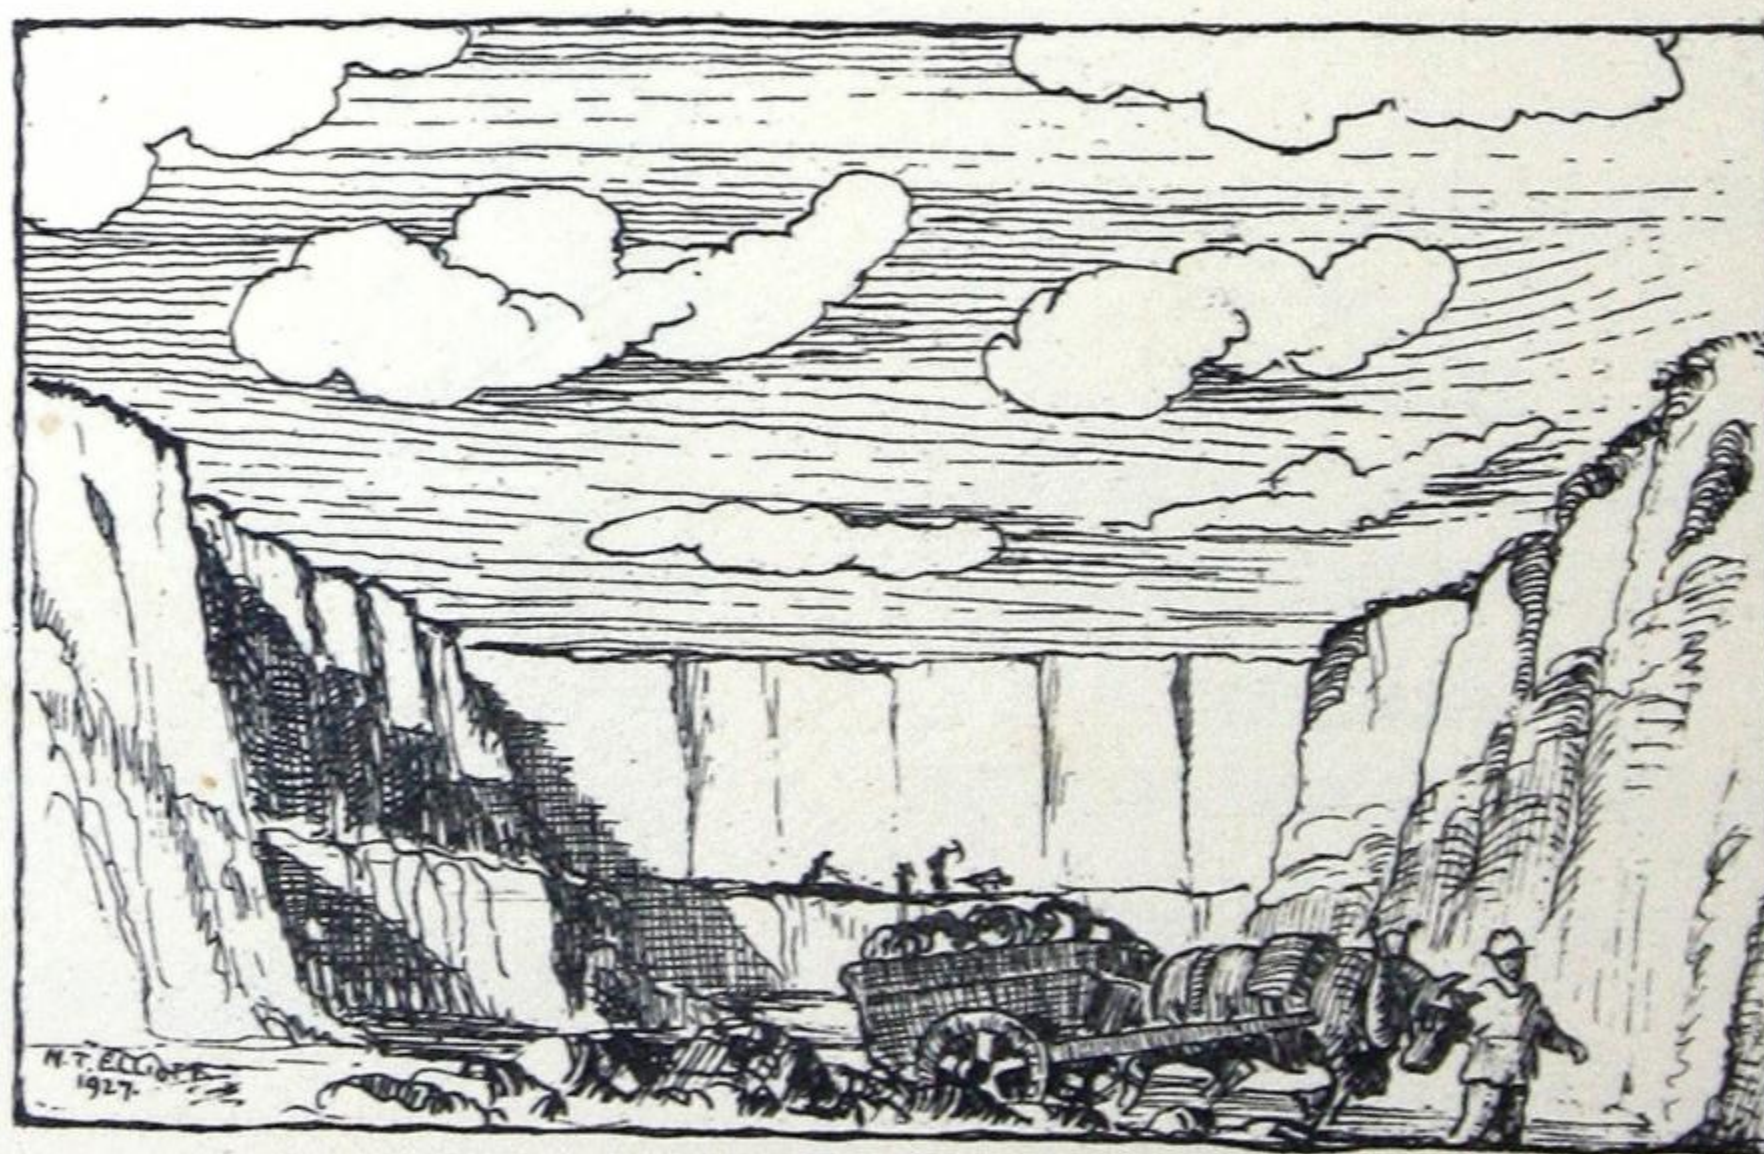

Clay Pugging by the Old Method

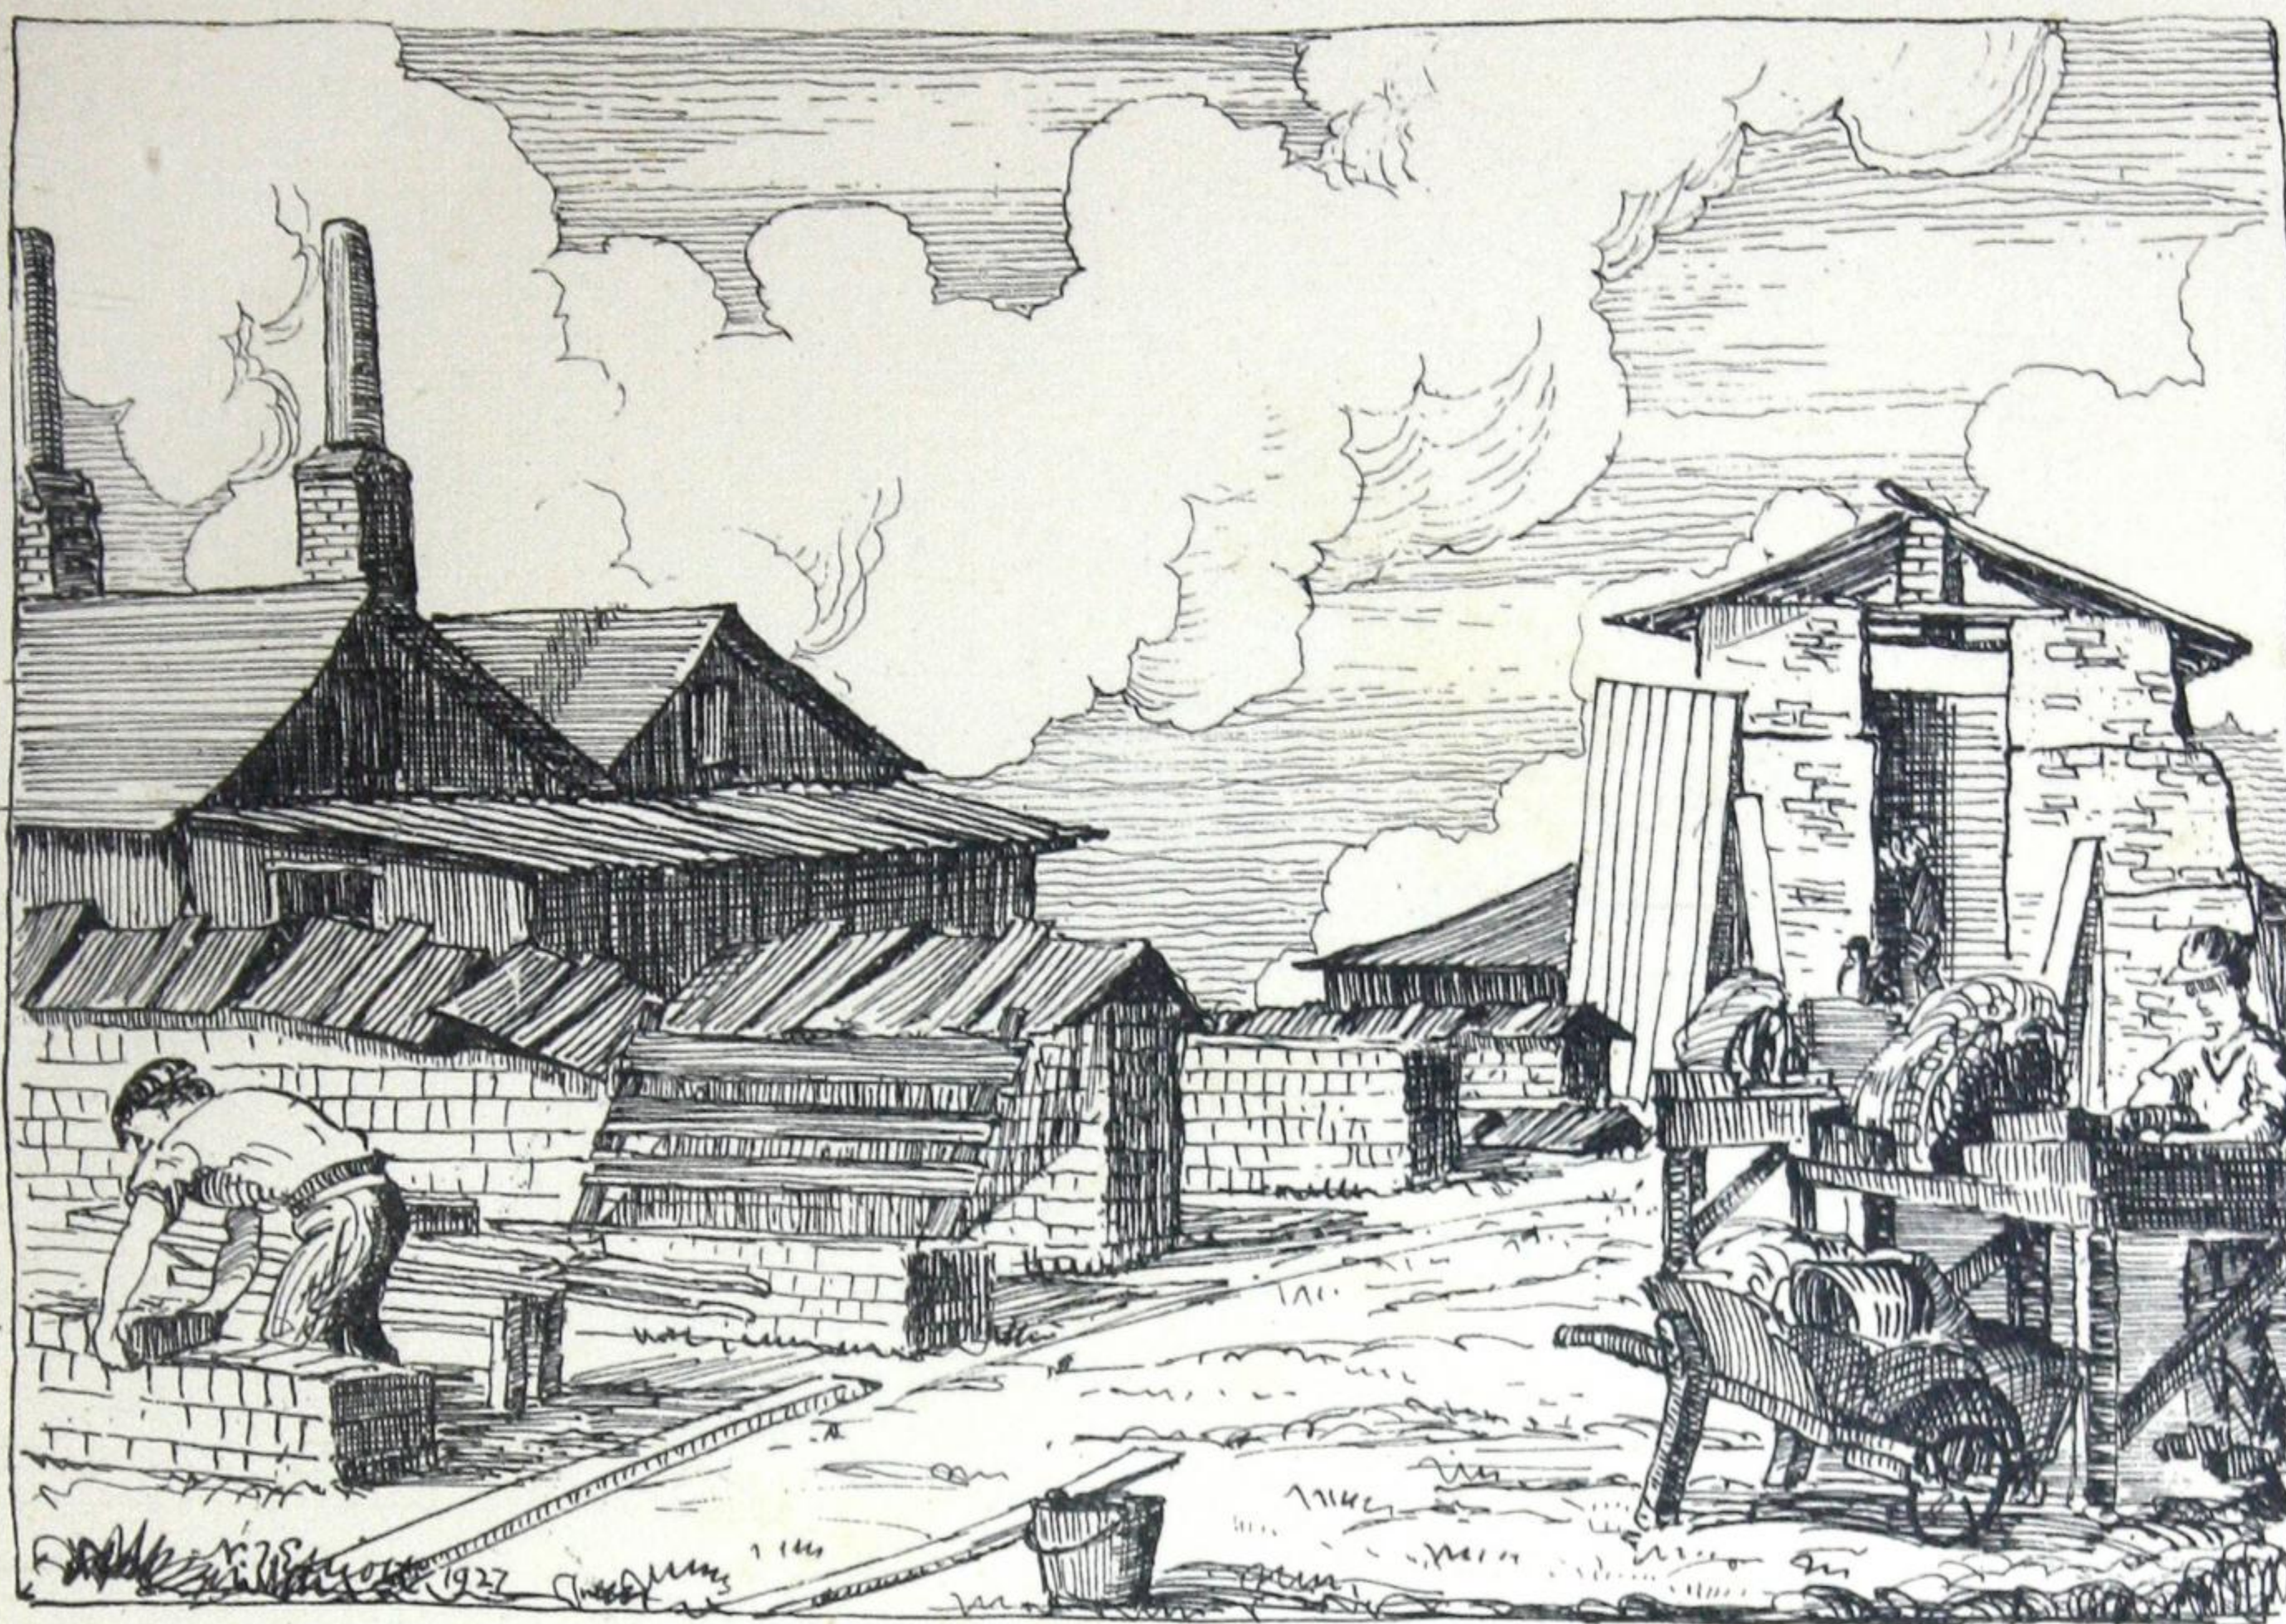

THERE is enclosed with this Booklet a sheet of **diagrams** showing a number of the different bricks we make, giving their measurements and a few suggestions as to their uses. Special attention is drawn to our

OCTAGON BRICKS

Nos. C, C₁, C₂, D, D₁, E and F, which have a multitude of uses, some of which are shown on the pages of this booklet. (Sketch Nos. 5, 7, 13, 18, 19).

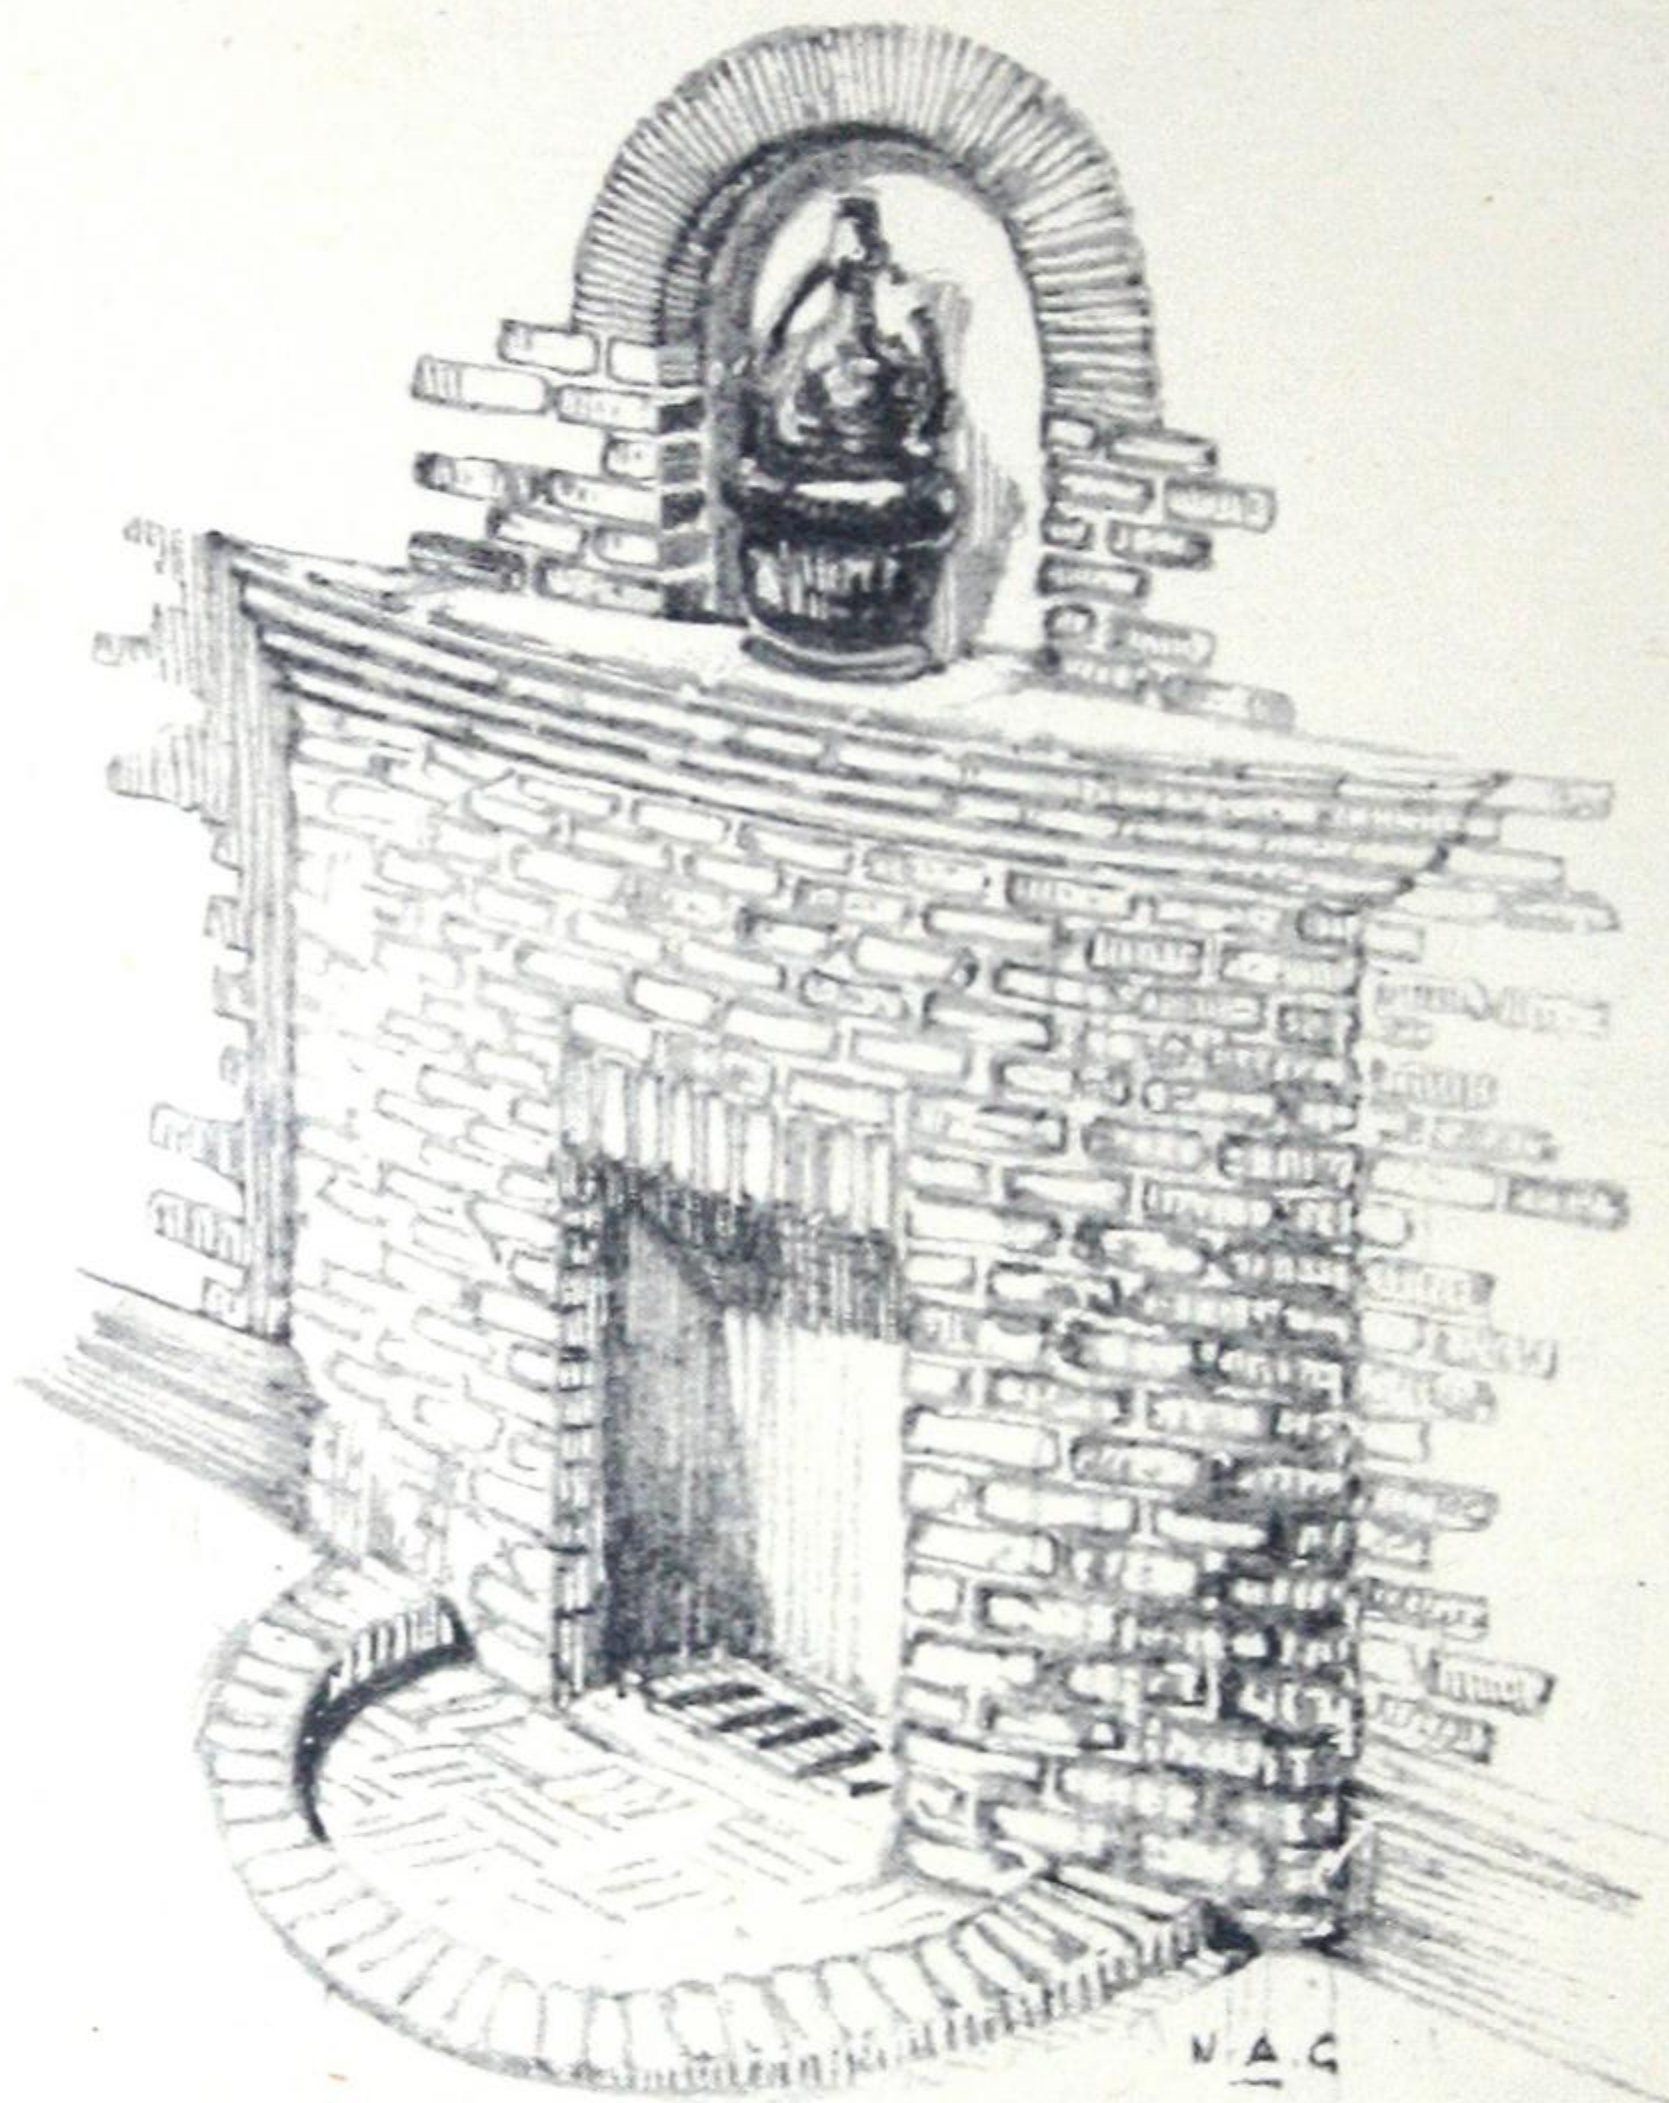

The Old-time Clay Pit

General View of Old Style Brick Works

IN conclusion, we will be pleased to show any client over our works, where the making of these "Antique Bricks" and also the modern and up-to-date methods of the manufacture of "Sand and Lime Bricks" and "Stoneware Drainpipes and Fittings" can be seen.

A postcard will ensure your being conducted by Mr. Elliott, personally.

THE WESTHOWE FIRE

ICKS

After receiving many requests from our Brick Fireplace clients, we have now designed a fire which is particularly suited for use in conjunction with Brick Fireplaces or any type of surround.

The Westhowe Fire is made in two pieces, as shown in the accompanying diagram.

The combination of the angles of the fire back and bottom were arrived at after considerable experiment and ensure perfect combustion and maximum heating powers.

The bottom is so designed to give exceptionally small fuel expenditure and at the same time the flutes in the bottom give sufficient draught to maintain a clear and steady fire.

One of the important features in the Westhowe Fire is that the well falls sharply in the front and rises gradually at the back, thereby eliminating the accumulation of dead ashes which so often gather at the rear of "Well Pattern" Fires, also, this sloping back to the well tends to throw the heat into the room.

These fire backs are made of carefully selected clays, combined with other ingredients, resulting in an exceptionally heat-resisting article.

Another good point is the simplicity of erection; the fire being made in only two pieces the fixing becomes a fool-proof operation.

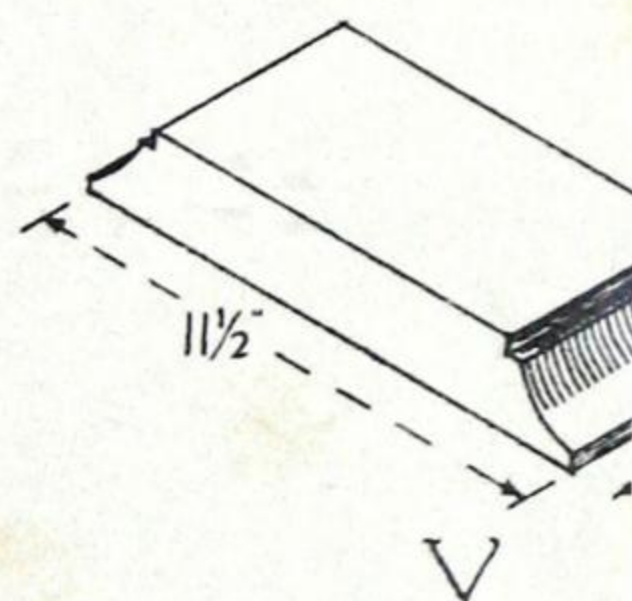

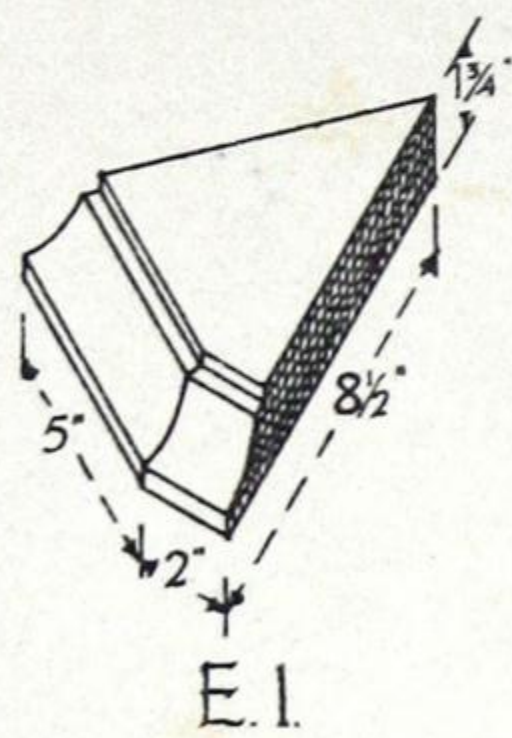

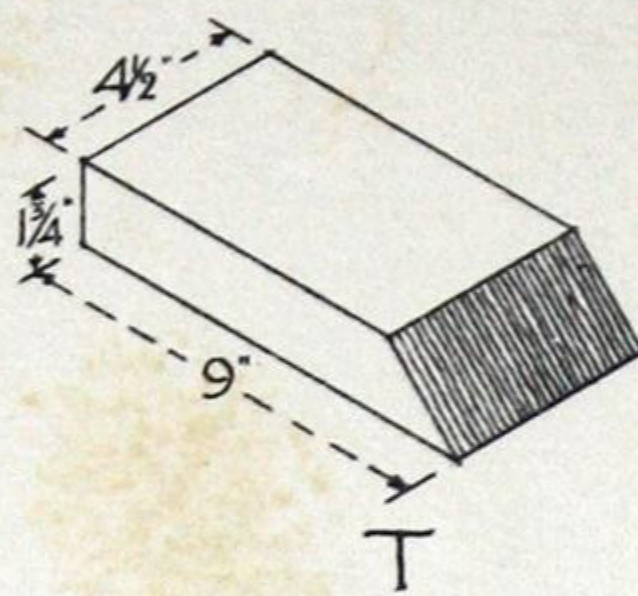

The Westhowe Fire is made in the following sizes:— 21in., 18in., 16in. and 14in. Larger or smaller sizes can be made to order.

The prices of the above are as follows:— 21in. at 35/-; 18in. at 30/-; 16in. at 28/-; 14in. at 25/-, at our works. These prices are subject to variation without notice.

I	Short moulded brick	S	Special arch tile, moulded
J	Short moulded return		
K	Short moulded brick		
K1	Long moulded brick		

NOTES ON THE ABOVE

With a few exceptions the bricks shown on the opposite page explain themselves, but we think that a word is necessary in the following cases :—

C Full octagon brick, small: Four bricks to the complete octagon. This brick was originally designed to build up the side columns of fireplaces as in sketches Nos. 5, 7, 13, of our catalogue; a larger octagon brick is made which can be used as a cap to these columns, and has an overhang of 1" over the "small octagon brick" (see **D1**).

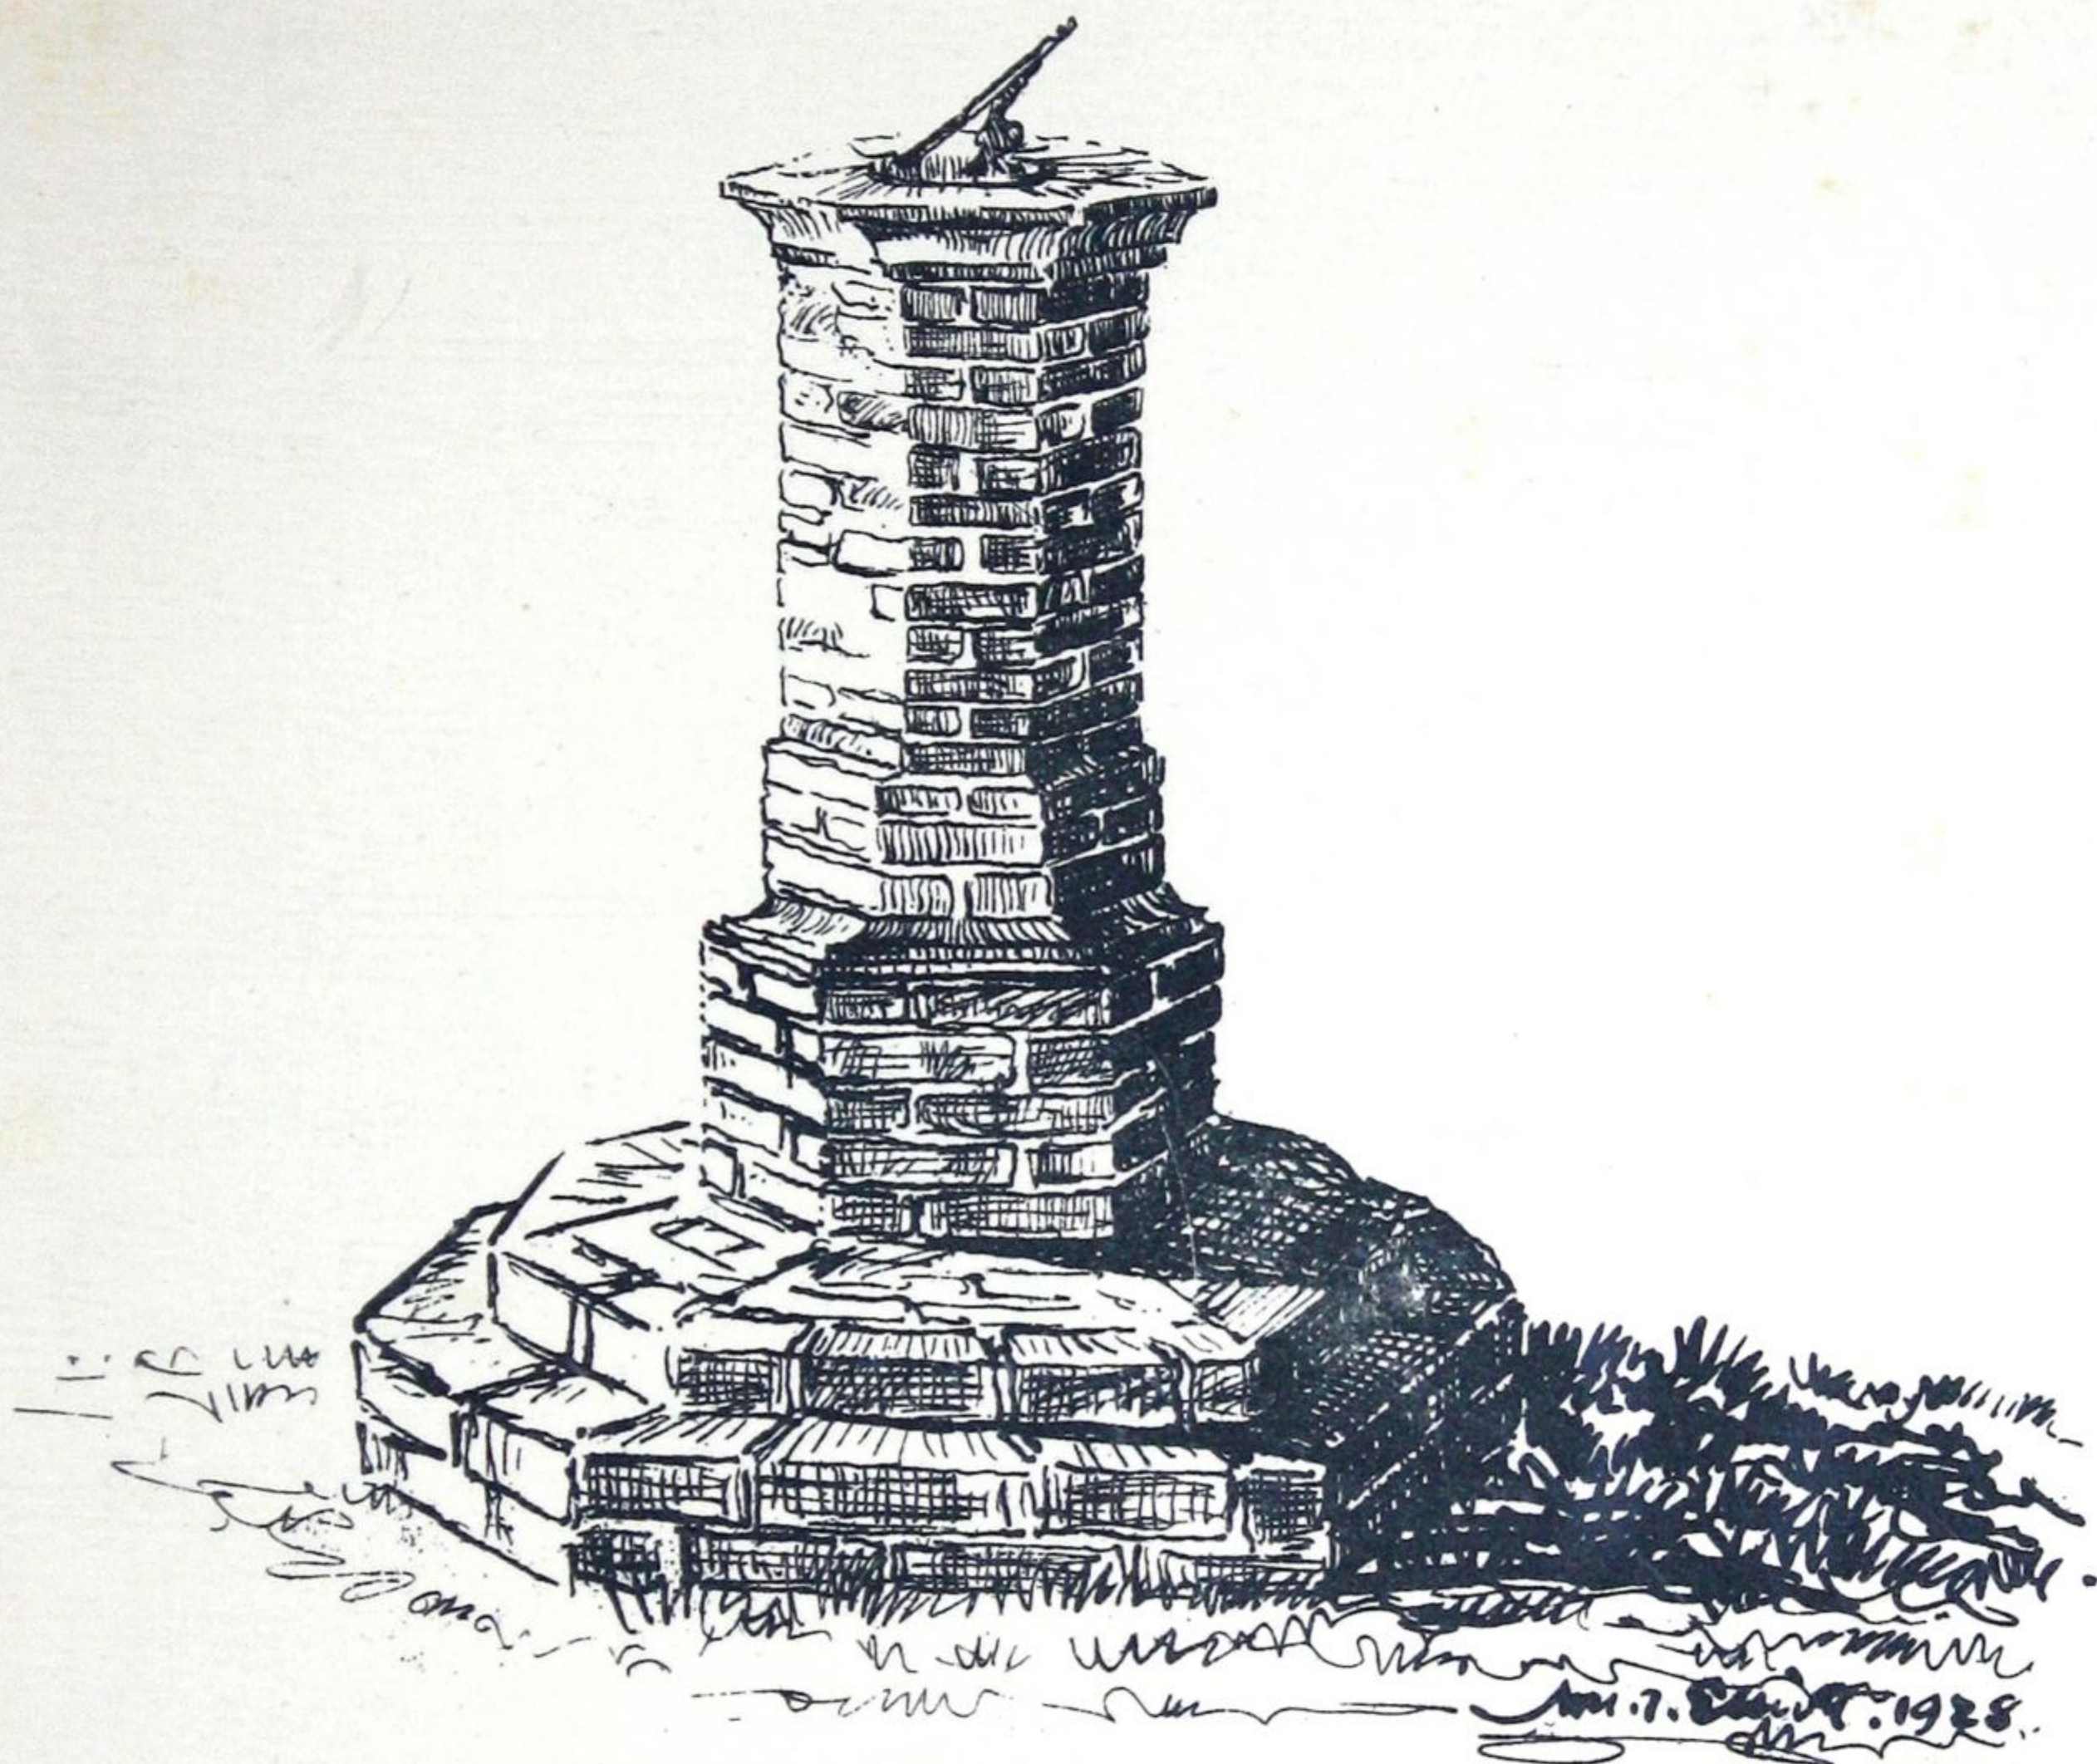

E and **F** are moulded caps for the octagon bricks with the required angle of 135° .

C1 and **D** are to be used to increase the diameter of the octagon to any required size, and for other uses which suggest themselves. As one can imagine, these octagon bricks have a multitude of uses. Some that are immediately apparent are: Encasing steel columns or stanchions, gateposts, chimneys (sketch No. 19), pergola columns (sketch No. 18), verandah columns, sundials, etc., etc. Their overall dimension is 14".

G. Ribbed hob brick. This brick can be used in many ways as shown in sketches Nos. 10, 11 of our catalogue. The grooves are $\frac{3}{8}"$ wide and $\frac{3}{8}"$ deep, and when pointed with mortar give the impression of separate pieces of brick, but being actually in one piece are very strong and require little labour to lay.

K1. Moulded brick, long. These bricks being $11\frac{1}{2}"$ long are very useful for top of mantel shelves, giving a good even mantel top.

QUOTATIONS GIVEN ON REQUEST

In an old world garden the above Sundial
will create that longed for atmosphere of
the dignity and charm of past ages.

Price complete with Antique Brass
Sundial Plate £6 15s. od.

NAMES OF THE FOREGOING DIAGRAMS

T	Special herringbone brick	S1	Internal angle return for S tile
N3	Long Roman tile, $9" \times 4\frac{1}{2}" \times 1"$	S2	External angle return for S tile
M4	Hearth brick	V	Special 2" double moulded coping brick
U	1" bullnose brick	W	V-shaped coping brick
E1	Large moulded return for octagon brick	X	$\frac{1}{2}$ octagonal coping brick
L1	Moulded return, large	Y	Special string course brick

MULLION BRICKS

1	Mullion return	4	Stretcher jamb
2	Mullion brick	5	Header jamb
3	Jamb return	6	Head and sill brick

NOTES ON THE ABOVE

This second list is published in the hope that, like its predecessor, it will be useful to all brick users.

Since publishing the first list we have found that other bricks could be made to help greatly both the designer and the bricklayer.

We have placed first on this list our special herringbone brick **T**. Its size is $9" \times 4\frac{1}{2}" \times 1\frac{3}{4}"$. One end is specially moulded to form an angle of 45° , thus greatly facilitating the laying of herringbone brickwork.

This brick does away with all the usual labour of cutting and rubbing the angles, with the accompanying high expense. Also, these specially moulded bricks result in much better work.

This brick is particularly useful for brick paving in garden and other work.

N3, **M4** and **U** explain themselves.

E1 is an improvement on **E** shown on our previous list, as it breaks the bond in capping octagonal work.

Again, **L1** is an improvement on **L**, which is also shown on our first list. This brick is the return angle brick for **K** and **K1**, giving a much better seating than did the smaller brick. **L1** can also be used for either hand.

Bricks **S1** and **S2** are the angle returns for our **S** tile, as these bricks obviate the mitreing of the **S** tile they effect a great saving in labour and expense.

The mullion bricks, again, explain themselves.

We will be pleased to give you any further information on our products, all of which are unconditionally guaranteed to give satisfaction.

QUOTATIONS GIVEN ON REQUEST
